

ABISHEK BHAT R

Senior Data Analyst | Microsoft Certified Power BI Data Analyst Associate

9894466760 | abishekbhat31@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Senior Data Analyst with 3+ years of experience architecting statistical and machine learning solutions — regression, clustering, and time-series forecasting — integrated with executive-facing Power BI dashboards. Proficient in Python (Pandas, NumPy, scikit-learn), SQL, and Advanced Excel for building scalable analytical pipelines and automating manual workflows. Experienced client-facing consultant, translating complex quantitative analysis into actionable business strategy. PL-300 certified; currently expanding into process automation, blockchain, and deep learning applications.

SKILLS

BI & Visualization: Power BI (DAX, Power Query), Tableau, Advanced Excel (Pivot Tables, VLOOKUP/XLOOKUP, Macros)

Programming & ML: Python (Pandas, NumPy, scikit-learn), SQL, C/C++, Regression, Clustering, Time-Series Forecasting, Feature Engineering, Process Automation

Infra & Tooling: Azure, Git, Linux, Streamlit

CORE TECHNICAL COMPETENCIES

Statistical Modeling • Predictive Analytics • ETL Pipeline Design • Feature Engineering • A/B Testing • Data Warehousing • Anomaly Detection • Cross-Validation • Hyperparameter Tuning • Data Visualization • Stakeholder Management • KPI Reporting • Dashboard Development • Process Automation • Client Consulting

PROFESSIONAL EXPERIENCE

Nielsen IQ | Chennai, India

Senior Data Analyst

Aug 2026 - Present

- Lead the application of statistical and machine learning techniques (regression, clustering, time-series forecasting) to architect predictive models and surface latent patterns across large, multi-dimensional client datasets.
- Design and productionize ML-driven analytical pipelines in Python (Pandas, NumPy, scikit-learn) and SQL, incorporating feature engineering and cross-validation to improve forecasting accuracy by 22% and reduce manual analysis time by 35%.
- Spearheading a Python and ML-based process automation initiative to re-architect repetitive, manual team workflows into scheduled scripts and pipelines — currently in development, with a projected reduction in weekly manual effort of up to 98% upon full rollout.
- Own end-to-end delivery of executive-facing Power BI dashboards and BI solutions, translating complex ML outputs into clear, decision-ready KPIs for 15+ stakeholders.
- Mentor a team of 4 junior analysts on SQL optimization, statistical best practices, and dashboard development, raising team-wide reporting quality and cutting turnaround time by 30%.
- Act as lead consultant on client engagements, converting advanced analytical and ML findings into strategic, actionable business recommendations.

Data Analyst

Mar 2025 - Jul 2026

- Analyzed multi-dimensional datasets (store, area, market, population) and translated ambiguous client requirements into structured analytical frameworks to generate strategic insights.
- Designed and optimized data pipelines using SQL and Python (Pandas, NumPy) to enable scalable analytics and pattern discovery across 50+ datasets.
- Developed executive dashboards and interactive business intelligence solutions using Power BI to monitor KPIs and support data-driven decision-making.
- Collaborated with clients as a consultant, transforming analytical findings into compelling narratives and delivering practical recommendations for operational and strategic initiatives.

Infoc | Trichy, India

Data Analyst - Trainee

May 2024 - Nov 2024

- Developed Power BI reports and visualizations using DAX for data transformation, enabling descriptive, predictive, and prescriptive analytics to drive actionable insights.
- Collaborated with cross-functional teams to enhance reporting and visualization processes, improving business intelligence and decision-making.

C/C++ Developer

Feb 2023 - Jan 2024

- Collaborated effectively with interdisciplinary teams of developers and testers to deliver robust software solutions tailored for clients in the financial sector.
- Diagnosed and resolved user-reported issues, implementing enhancements that ensured a seamless user experience.
- Applied debugging and root-cause analysis techniques in C/C++ to identify and resolve critical defects in trading and financial software modules, improving system stability and reliability.
- Participated in code reviews and version control workflows (Git) within an Agile development environment, contributing to maintainable, production-grade codebases.

PROJECTS

Customer Segmentation

- Implemented a K-Means clustering algorithm using scikit-learn to segment customers by age and spending score, identifying distinct behavioral cohorts.
- Performed exploratory data analysis (EDA) and feature scaling (StandardScaler) to optimize cluster separation and interpretability.
- Applied the Elbow Method to determine the optimal number of clusters and visualized results using Matplotlib/Seaborn to inform targeted marketing strategy.

Volvo Business Case

- Designed a relational database schema (SQL) to model Volvo Construction Equipment's end-to-end order-to-delivery process, ensuring referential integrity across entities.
- Wrote optimized SQL queries and joins to analyze delivery precision, lead times, and fulfillment bottlenecks.
- Built visualizations to communicate operational efficiency findings and support data-driven supply chain recommendations.

Campus Placement Prediction

- Built a classification model (Logistic Regression, Decision Trees) using scikit-learn to predict student placement likelihood from historical academic and demographic data.
- Conducted feature engineering and correlation analysis to identify the strongest predictors of placement outcomes.
- Evaluated model performance using accuracy, precision, recall, and confusion matrix metrics to validate predictive reliability.

Block Chain Working Sample

- Implemented a custom blockchain architecture in Python, including block creation, SHA-256 hashing, and chain-validation logic.
- Built an interactive Streamlit web interface to visualize block creation and verify chain integrity in real time.
- Applied core blockchain principles — proof-of-work, immutability, and distributed ledger design — in a working, testable prototype.

EDUCATION

K. Ramakrishnan College of Technology, Trichy

Bachelor of Engineering, Electronics and Communication Engineering | 2019 - 2023 | CGPA: 7.89

CERTIFICATIONS

- PL-300 — Microsoft Certified: Power BI Data Analyst Associate
- Post Graduate Program, Data Analytics — Imarticus Learning
- Machine Learning Internship — iNeuron Intelligence Pvt Ltd
- Web Development & Designing Internship — The Sparks Foundation
- SQL Certification — Skill Rack
- Continuing Education Program, Fintech — IIT Delhi

AWARDS & RECOGNITION

- Best Student Award — Institution of Engineers (India)

LANGUAGES

English • Tamil • Hindi • Gujarati
